

PRE-SEASON INSPECTIONS CHECKLIST

SNOWPLOWS

Suggested checkpoints during a pre-season inspection include:

- Change the hydraulic fluid.
- Grease the vertical pin (on V-plows) and other important wear points.
- Clean, inspect, and grease all electrical connections with dielectric grease.
- Check all fasteners for proper torque.
- Check the plow cylinders, hoses, and pump for leaks.
- Tighten the trip and return springs.
- Inspect all welds in the plow structure and vehicle mount.
- Inspect and re-torque all fasteners on the vehicle mount.
- Inspect the lights and properly adjust and align the plow lights.
- Make sure all plow functions work properly.
